

# Leishmaniasis Country Profile Generator

## User Manual

The Leishmaniasis Country Profile Generator, from now LCPG, retrieves country data from several sources for a specific year and puts it in an HTML country profile format ready to print in PDF.

## Table of Contents

|   |           |
|---|-----------|

# 1. Changelog

| Version | Date       | Changes  |
|---------|------------|--|
| 0.36    | 2020.03.12 | Feature: New tab to generate another CP<br>Bugfix: maps are now replaced instead of added when regenerating a CP<br>Bugfix: maps related API calls logic refactored: some calls were being executed twice.<br>Manual tab changed name to Help and help message is now included there.  |
| 0.35    | 2020.03.11 | Feature: A new error box appears if one or more API calls failed.<br>Bugfix: API calls logic refactored: some calls were being executed twice.   |
| 0.34    | 2020.03.09 | Bugfix: Monthly tables shows now "No Data" instead of undefined when no values found.<br>Bugfix: Monthly LineCharts are now appearing even when there is missing data.   |
| 0.33    | 2020.03.04 | Bugfix on placing values in the right place when getting indicator values.<br>Bugfix on Population value transformation from thousands to integer.<br>Some User Manual error corrections.  |
| 0.32    | 2020.01.17 | Indicator scanner <sup>1</sup> : Indicators shows now N/A if any of the dataelements in which those indicators are based on, are not requested to the countries through a form.  |
| 0.31    | 2020.01.14 | Subnational levels are now disabled if there are no orgUnits for that level  |
| 0.30    | 2020.01.09 | Zoom in and out buttons added to maps. Buttons disappear when printing.<br>Chart titles aligned with 2015 CPs.<br>Bugfix: Legend and map update buttons are now grayed out when no legend or map selected.   |
| 0.29    | 2019.12.20 | Provisional texts in red are now underlined<br>Bugfix: text editor didn't work always editing text attributes.<br>When no data in denominators, the result is now "No data" instead of "-".  |
| 0.28    | 2019.12.19 | Bugfix: screen passive is showing now "No data" or the value, instead 0 or undefined.<br>Workaround: cases are retrieved now from DE value, due to DHIS2 blanks indicator issue.<br>XXX_POP_AT_RISK_I indicators adapted.<br>Bugfix on several data and indicator retrieval order.   |
| 0.27    | 2019.12.18 | Bugfix: maps only generate national and last selected level now (instead of all levels).   |
| 0.26    | 2019.12.17 | direct exam and positive slides sections replaced by indicators<br>Four indicators NTD_LSH_XXX_EPI_NEW_UNSP_I names and codes changed to<br>IA_XXX_EPI_NewUnsp_INT   |
| 0.25    | 2019.12.16 | Treatment outcome. Initial cure rate, failure and fatality changed by indicators   |
| 0.24    | 2019.12.06 | Chart logic code improved.<br>Chart order changed: VL – CL – AZCL<br>Bugfix: charts were not correctly stacked.<br>Bugfix: undefined text under diagnostic tables.<br>Bugfix: PKDL cases were showing VL cases.<br>Bugfix: CGI section. Male gender was taking Female value.<br>Bugfix: CGI section. Age group population was not correctly rounded. |
| 0.23    | 2019.11.19 | Charts aligned. Charts size and font size reduced to adjust to two pages.  |
| 0.22    | 2019.11.18 | Title on yearly incidence and new cases charts   |
| 0.21    | 2019.11.08 | Introduction about N/A and No data added to 3.2 "Country profile" chapter.   |

<sup>1</sup> The Indicator Scanner module scans dependencies of indicators and writes N/A if one of the dependencies is not linked to the country through a dataset or program. Some Treatment Outcome indicators formulas are built as the addition of dataElements from the Simple AND the Detailed form. So, since only one (simple or detailed) form is assigned to one country, one of the dataElements will be always not connected to the country, making the Indicator Scanner think some of the information have never been asked to the country. To solve this incompatible approach, all the dataElements referenced in these multi-dataset indicators must be assigned both to the simple and the detailed version of the dataset, regardless the dataElement is shown in the form or not.

|      |            |  |
|------|------------|--|
|      |            | Total population and Population at risk description improved. (B1, C10, D5).<br>Bugfix: new cases and incidence chart. Gap between years and data fixed.   |
| 0.20 | 2019.11.07 | <i>Gender</i> and <i>Population age group</i> data is now retrieved from UN_WPP_POP indicators.<br><i>Life expectancy at birth</i> is now retrieved from GHO, not WB.  |
| 0.19 | 2019.11.05 | All texts reviewed and adapted to 2015 CP texts.<br><i>Country General Information</i> and <i>Control and Surveillance</i> sections show now in one column.<br>Printing the CP chapter of the manual updated<br>Long numbers are now converted to locale format (e.g. 1,203,103 instead 1203103)<br><i>Life expectancy at birth</i> and <i>GDP</i> values are now rounded to the nearest integer. ( <i>comments updated in this manual</i> ) |
| 0.18 | 2019.11.04 | Country names are now shortNames<br>Incidence rates indicators updated<br>Bugfix: <i>Control &amp; Surveillance</i> and <i>Treatment and medicines</i> sections were being only filled with VL data.<br>antiCache added for PDF manual   |
| 0.17 | 2019.11.04 | New chart configuration section<br>Version and date now available on loading page<br>Bugfix: User was not able to select first map or legend in the map configuration section.   |
| 0.16 | 2019.11.01 | Bugfix: App crashed when trying to retrieve footnotes from countries not having children.  |

## 2. Metadata and permissions requirements

LCPG and the user using it need metadata (and eventually) data read access to the following metadata:

| Type           | ID          | Name   | Comments  |
|----------------|-------------|--|---|
| program        | w9hSFsNr3Vh | CL_cases_by provenance   |   |
| program        | NVUIJzlakuO | Footnotes for Report Generator RG_                               | Needs to be assigned to the country                             |
| program        | Jd8gnElt8uT | Leishmaniasis endemicity   | Needs to be assigned to the country                             |
| program        | i5JSf4fffI2 | VL_cases_by provenance   |   |
| dataSet        | Uc3j0vpsfSB | Cutaneous Leishmaniasis - ACL/ZCL - Detailed aggregated - Annual |   |
| dataSet        | Sn0dExPzQqW | Cutaneous Leishmaniasis - ACL/ZCL - Simple aggregated - Annual   |   |
| dataSet        | tnek2Ljfulm | Cutaneous Leishmaniasis - Detailed aggregated - Annual           | *Must include DE from Simple<br><u>CL ITxO Outcome Type</u>     |
| dataSet        | zna8KfLMXn4 | Cutaneous Leishmaniasis - Simple aggregated - Annual             | *Must include DE from Detailed<br><u>CL ITxO Tx-drug</u>        |
| dataSet        | NKWbkXyf05F | General information  | Needs to be assigned to the country                             |
| dataSet        | p0NhuIUoeST | GHO indicators for NTDs  | Needs to be assigned to the country                             |
| dataSet        | fdBM4sWSuPR | Visceral Leishmaniasis - Detailed aggregated - Annual            | *Must include DE from Simple<br><u>VL ITxO Outcome Type</u>     |
| dataSet        | SHw2zOysJ1R | Visceral Leishmaniasis - Simple aggregated - Annual              | *Must include DE from Detailed<br><u>VL INIT ITxO Drug Type</u> |
| sqlViews       | mejiv059hWs | categoryOptionCombos in DS                                       |   |
| sqlViews       | oQdlVqkVlxC | data elements in dataSet   |   |
| sqlViews       | lrawAndH02Y | data elements used in program                                    |   |
| legendSet      | clwSlrqvmMx | ACL Incidence  |   |
| legendSet      | TnU2O8YxH51 | CL Incidence   |   |
| legendSet      | gUOjExXros1 | VL Incidence   |   |
| legendSet      | TbrqpLWzLS8 | ZCL Incidence  |   |
| indicatorGroup | nozEoB0uRq9 | NTD_Leish_CP_INC_charts_IG                                       | The IGs themselves are not needed, only their indicators.       |
| indicatorGroup | VvTNYst2QCW | NTD_Leish_CP_maps_IG   |   |
| indicatorGroup | KUdeVRtIK45 | NTD_Leish_CP_popAtRisk_IG  |   |

| indicatorGroup | OxgkCeNyVVm | NTD_LSH_TREAT_completed_IG                                       |   |
| indicatorGroup | jLukoqAXKxK | NTD_Leish_CP_tx_outcome  |   |
| indicatorGroup | jCYF44Wq3r7 | NTD_LSH_SCREEN_passive_IG  |   |
| indicatorGroup | VbB8TCGqmH5 | UN_WPP   |   |

### 3. Generating a country profile

Look for the app called “Leishmaniasis Country Profile Generator” in the apps bar of the WIDP instance.

A form box like the following will appear

### Generate Country Profile

Year

Country

Start preparing CP

### Generate Country Profile

Year

Country

People's Democratic Republic of Algeria  
Republic of Albania

Start preparing CP

Start typing a year and a country. Once it starts appearing in the list, select it. This selection is needed, otherwise, the system won't take in account the text you typed.

The LCPG has two main sections: The configuration panel and the country profile itself.

Configuration Area - Won't be printed  
Instructions : Left click to add a footnote number  
Right click to edit an element.

General Maps Footnotes

Leishmaniasis types to show:

Configuration panel

Country profile

### 3.1. Configuration panel

In this panel you can configure which elements are showing in the CP and how. It has three tabs: General, to manage which types of the disease will appear in the tables, the graphs and the subnational level taken in account; maps to configure maps, legends and “notas bene”; and Footnotes, to manage which footnotes will appear in the CP.

#### 3.1.1. General

The screenshot shows the 'General' tab of the configuration panel. It contains three main sections: 'Leishmaniasis types to show:', 'Leishmaniasis types to show in monthly table:', and 'Graphs to show:'. Each section has a set of checkboxes for different disease types. At the bottom, there is a dropdown menu for '1st sub-national administr...' and a checkbox for 'recalculate maps to this level'.

| Section                                       | Option                         | Checked |
|---|--------------------------------|---------|
| Leishmaniasis types to show:                  | VL                             | Yes     |
|   | CL                             | No      |
|   | ACL                            | No      |
|   | ZCL                            | No      |
|   | PKDL                           | No      |
|   | MCL                            | No      |
| Leishmaniasis types to show in monthly table: | VL                             | Yes     |
|   | VL (previous year)             | No      |
|   | CL                             | No      |
|   | CL (previous year)             | No      |
|   | ACL                            | No      |
|   | ACL (previous year)            | No      |
| Graphs to show:                               | CL monthly                     | No      |
|   | AZCL monthly                   | No      |
|   | VL monthly                     | Yes     |
|   | CL yearly                      | No      |
|   | AZCL yearly                    | No      |
|   | VL yearly                      | Yes     |
| Sub-national level                            | 1st sub-national administr...  |         |
| Recalculate maps                              | recalculate maps to this level | Yes     |

Leishmaniasis types to show are checked if, at least, one leishmaniasis dataset of this type (VL, CL or ACL/ZCL) is assigned to the country. PKDL and MCL are unchecked by default.

The behavior is the same in the monthly table checkboxes except for previous years, whose checkboxes are by default unchecked.

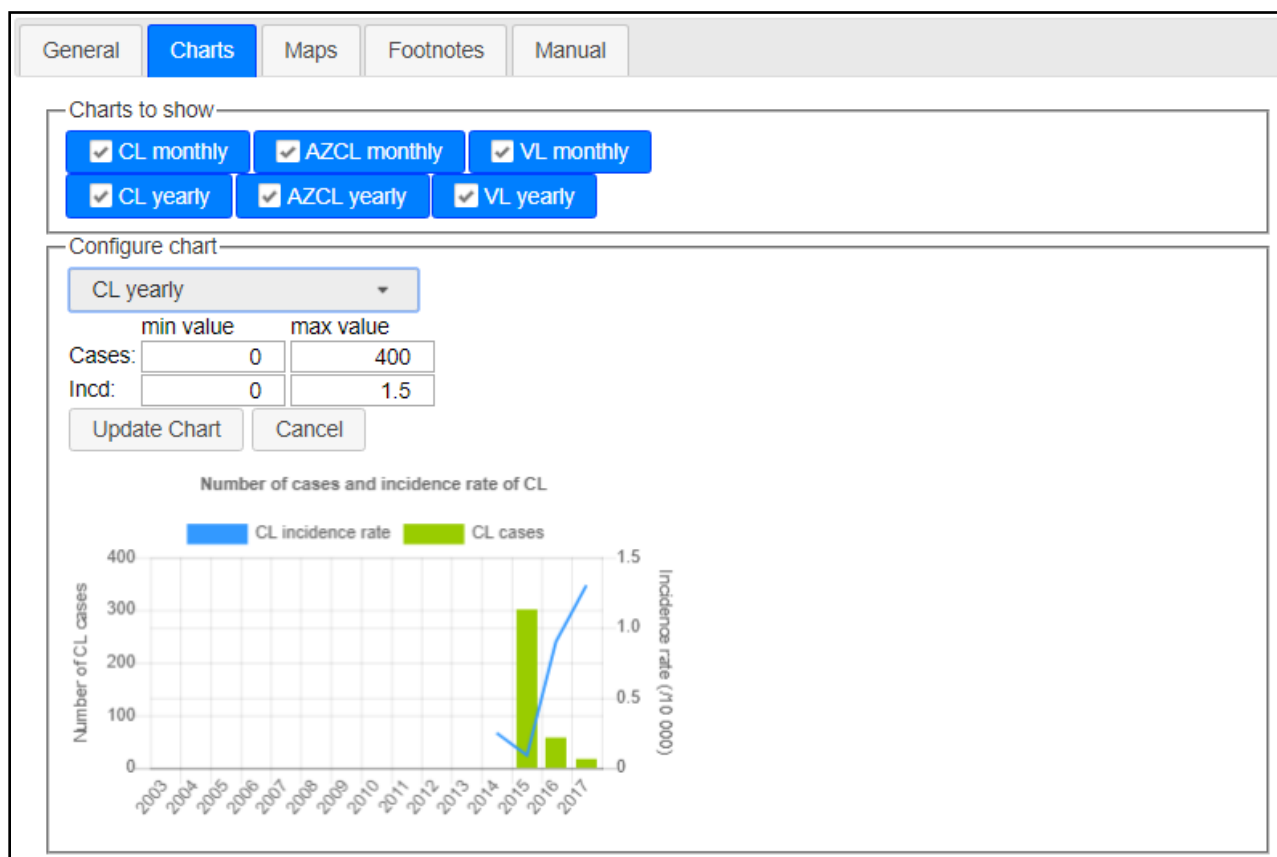

The graphs checkboxes follow also the same logic.

The subnational level dropdown menu is set, by default, to the first subnational level. Changing it to 2<sup>nd</sup> or 3<sup>rd</sup> subnational level will update:

- The “Number of endemic X sub-national...” row text-and-value in the Country General Information section.
- The “Number of endemic X sub-national...” row text-and-value in the Epidemiology section.
- All the maps if the “recalculate maps to this level” checkbox is checked.

Some subnational levels may be disabled. That means there are no organisationUnits for that level.

### 3.1.2. Charts

The active chart checkboxes are checked by default. Check or uncheck a checkbox to, respectively, make a chart appear or disappear.

You can select a chart to configure it (if its checkbox is unchecked it will appear as greyed out).

You can adapt the lower and upper bounds of the “number of cases” axis and (if available) the incidence axis. Just type or use the arrows in the correspondent input field to modify the values. You will be able to see changes in real time.

Click on “Update chart” to update it with the new bounds or Cancel to leave it as it was before.

### 3.1.3. Maps

The active map checkboxes are checked by default. Check or uncheck a checkbox to, respectively, make a chart appear or disappear.

The screenshot shows a configuration window with three tabs: 'General', 'Maps' (selected), and 'Footnotes'. The 'Maps to show' section contains four checkboxes: 'VL incidence' (checked), 'CL incidence' (unchecked), 'ACL incidence' (unchecked), and 'ZCL incidence' (unchecked). The 'Configure map' section includes a 'Select a Map' dropdown menu, 'OrgUnit levels' set to 'WHO Member States - Level 1' with a slider, a background style dropdown set to 'OSM Light', 'Opacity' set to 80, 'Height' set to 315, and 'Width' set to 420. There is an 'Update Map' button. On the right, there is a 'Select a Legend' dropdown, a 'Font size' input, an 'Update Legend' button, and two 'Resize Nota Bene for Maps' sections, each with 'Disabled' (selected) and 'Enabled' radio buttons.

To update a map, select a map name on the dropdown. Select the deepest subnational level you want to see drawn in the map, only the highest and the lowest levels will be painted. You can select also the background layout, the opacity, the height and the width. Click “Update Map” once you finished the configuration.

You can relocate and resize the legend within the map. To do that, select a legend on the right dropdown menu. You will see appear the legend at right. You can resize it, edit the text or select the corner where it will be shown. Click “Update Legend” to apply changes.

Size of the two “Nota Bene” in the CP are locked by default. You may enable this feature to adapt the size of the box to the content or the location. Remember putting them back to “disabled” once you have finished.

### 3.1.4. Footnotes

General

Maps

Footnotes

Stored footnotes

Defined as "In this reporting period, an area at the 3rd sub-national administrative level reporting cases for the first time ever"

Defined as "Number of people living in 3rd sub-national administrative level endemic areas"

Defined as "In this reporting period, an area at the 2nd sub-national administrative level reporting cases for the first time ever"

Defined as "Number of people living in 2nd sub-national administrative level endemic areas"

Defined as "In this reporting period,

Footnotes page 1

1 Defined as "In this reporting period, an area at the 3rd sub-national administrative level reporting cases for the first time ever"

2 Defined as "Number of people living in 3rd sub-national administrative level endemic areas"

3 Relapse in this country is defined as: "a patient who experiences recurrence of VL symptoms with parasitological confirmation at any time point after initial cure"

Footnotes page 2

4 Failure in this country is defined as: "signs and symptoms persist or recur during treatment or up to initial treatment outcome assessment"

In this section you organize the footnotes stored in and got from the footnote program.

To move one footnote from one page to another or to remove from the CP, just drag and drop it in the correct box. You can reorder them within the box. The footnote index will be accordingly updated. However, the index you put in the CP text are not "linked" to these footnotes: It's up to you to make sure the reference and the index match.

## 3.2. Country profile

LPCG usually shows N/A when Not Applicable (for example, data was not requested to the country<sup>2</sup>) and No data when blank data (no 0's) is found in the system. Other complex cases are explained in their own section.

### 3.2.1. Texts to update before printing

Two texts in CP are generated but must be verified before printing. Those text are highlighted in red and, as described in 2.2.2 section, can be modified and its color changed to black. The texts are:

Name of the division levels: The system, takes, as example, the first subdivision level found, but this text should be updated to its specific category name (region, district, department, upazilla... etc).

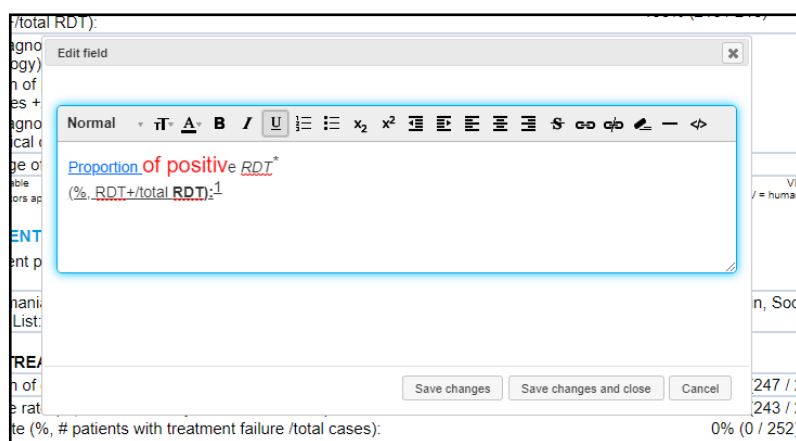

|  |               |
|--|---------------|
| Age group <15/> 14 years, %:                                     | - / -         |
| Life expectancy at birth in years (F/M):                         | N/A /<br>N/A  |
| Number of 1st sub-national administrative level divisions, name: | 6,<br>Central |

Title on maps: The text in red is automatically changed when you check or uncheck the maps, checkboxes. Just, verify the title is correct and change the color to blue.

Distribution of VL and CL cases per 10 000 population

### 3.2.2. Edit elements in the CP

You can edit almost any text in the CP. To do that, just right click on the element and an edit field box will pop up. You can change the text, color, size, text style, add hyperlinks, etc.

<sup>2</sup> From 0.32, the LPCG scans the indicators dependencies (the dataElements or indicators in which those indicators are based on) and shows N/A if any of them are not assigned to one of the datasets of programs assigned to the country.

### 3.2.3. Footnote elements in the CP

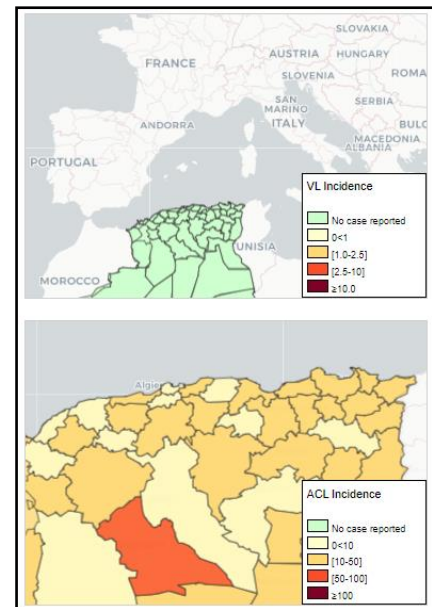

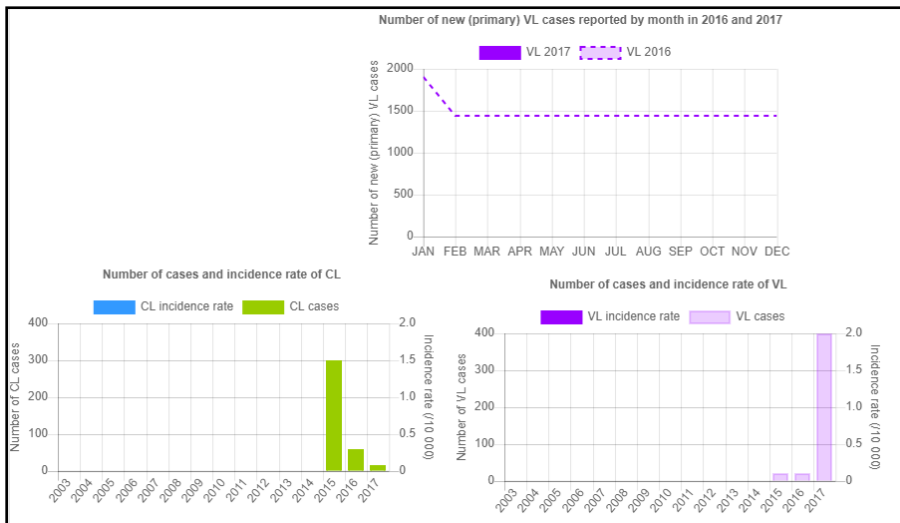

You can footnote almost any element of the CP by left clicking on the element. A footnote index (1 for first clicked element) will be added to the element. The next element will be footnoted with the number “2” and so on. If you want to remove a footnote index, just left click again on it. It’s better to remove all higher footnote indexes first, to keep a logic sequence of indexes.

### 3.2.4. Arrange maps and charts

Charts and maps can be moved by clicking on them and moving the mouse to the desired location.

In addition, maps can be zoomed in and its content moved up, down, left or right. However, they cannot be zoomed out for the instance. If you need to reset a map, just go to the maps section in the configuration zone, select the map and click on “Update map”.

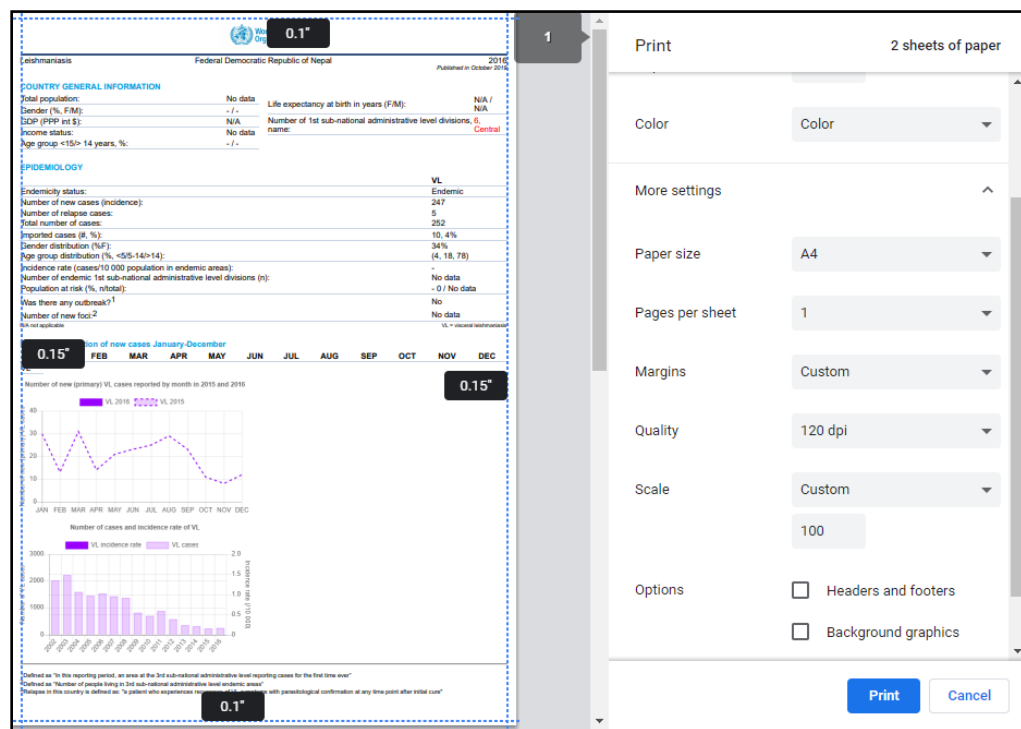

### 3.2.5. Printing the CP or saving it as PDF

To generate the PDF version of the CP, click [Ctrl]+[P].

You can adjust the final with the parameters:

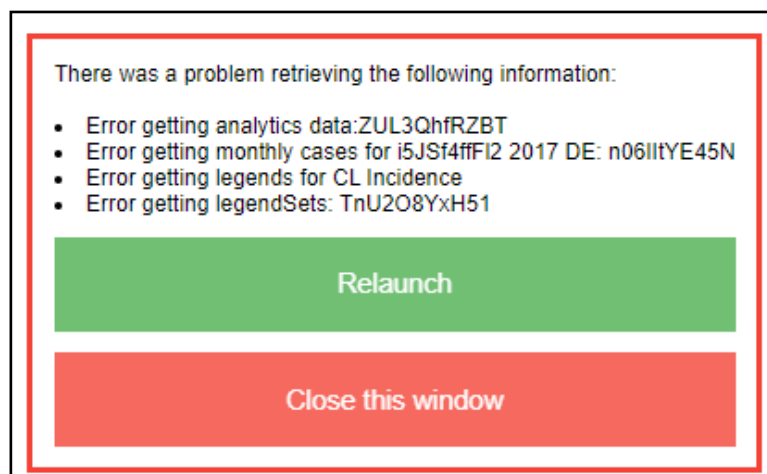

- paper size (A4)
- scale (normally 100%)
- margins (minimum or custom).
- Uncheck "Headers and footers"

Select your printer or the option "Save as PDF".

### 3.2.6. Dealing with unexpected errors

LCPG makes several API calls in the background to retrieve information from many different sources. It may occur that one or more of those API calls fail (e.g. due to a punctual internet interruption). In that case, an error report window will appear describing which calls failed. You may click on relaunch to reload the CP for the same CP and year. You may also close the window if part of the CP is visible behind the window, knowing that part of the information is missing.

# 1. Source of information in country profile sections

## 1.1. Country general information section

| COUNTRY GENERAL INFORMATION |                   |                     |  |
|-----------------------------|-------------------|---------------------|--|

## 1.4. Maps section

### Distribution of VL/CL/ACL/ZCL cases per 10 000 population

The boundaries and names shown and the designations used on this map do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted and dashed lines on maps represent approximate border lines for which there may not yet be full agreement.  
Map production: WHO/HTM/NTD/IDM
