

Leishmaniasis Country Profile Generator

User Manual

The Leishmaniasis Country Profile Generator, from now LCPG, retrieves country data from several sources for a specific year and puts it in an HTML country profile format ready to print in PDF.

Table of Contents

1. Metadata and permissions requirements

LCPG and the user using it need metadata (and eventually) data read access to the following metadata:

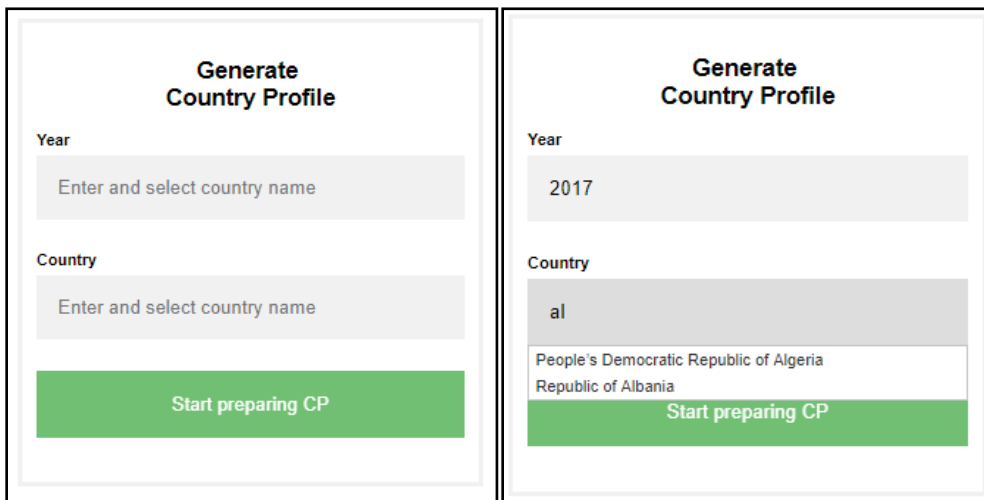

Type	ID	Name	Comments
program	w9hSFsNr3Vh	CL_cases_by provenance	
program	NVUljZlakuO	Footnotes for Report Generator RG_	Needs to be assigned to the country
program	Jd8gnElt8uT	Leishmaniasis endemicity	Needs to be assigned to the country
program	i5JSf4ffFI2	VL_cases_by provenance	
dataSet	Uc3j0vpsfSB	Cutaneous Leishmaniasis - ACL/ZCL - Detailed aggregated - Annual	
dataSet	Sn0dExPzQqW	Cutaneous Leishmaniasis - ACL/ZCL - Simple aggregated - Annual	
dataSet	tnek2Ljfulm	Cutaneous Leishmaniasis - Detailed aggregated - Annual	
dataSet	zna8KFLMXn4	Cutaneous Leishmaniasis - Simple aggregated - Annual	
dataSet	NKWbkXyfO5F	General information	Needs to be assigned to the country
dataSet	p0NhulUoeST	GHO indicators for NTDs	Needs to be assigned to the country
dataSet	fdBM4sWSuPR	Visceral Leishmaniasis - Detailed aggregated - Annual	
dataSet	SHw2zOysJ1R	Visceral Leishmaniasis - Simple aggregated - Annual	
sqlViews	mejVo59hWs	categoryOptionCombos in DS	
sqlViews	oQdlVqkVlxC	data elements in dataSet	
sqlViews	lrawAndH02Y	data elements used in program	
legendSet	clwSlrqvmMx	ACL Incidence	
legendSet	TnU2O8YxH51	CL Incidence	
legendSet	gUOjExXros1	VL Incidence	
legendSet	TbrqpLWzLS8	ZCL Incidence	
indicatorGroup	nozEoB0uRq9	NTD_Leish_CP_INC_charts_IG	It doesn't need the IG itself but its indicators.
indicatorGroup	VvTNYst2QCW	NTD_Leish_CP_maps_IG	It doesn't need the IG itself but its indicators.
indicatorGroup	KUdeVRtIK45	NTD_Leish_CP_popAtRisk_IG	It doesn't need the IG itself but its indicators.
indicatorGroup	Wp7ZgcxoAwM	NTD_LSH_EPI_NewCases_IG	It doesn't need the IG itself but its indicators.

2. Generating a country profile

Look for the app called “Leishmaniasis Country Profile Generator” in the apps bar of the WIDP instance.

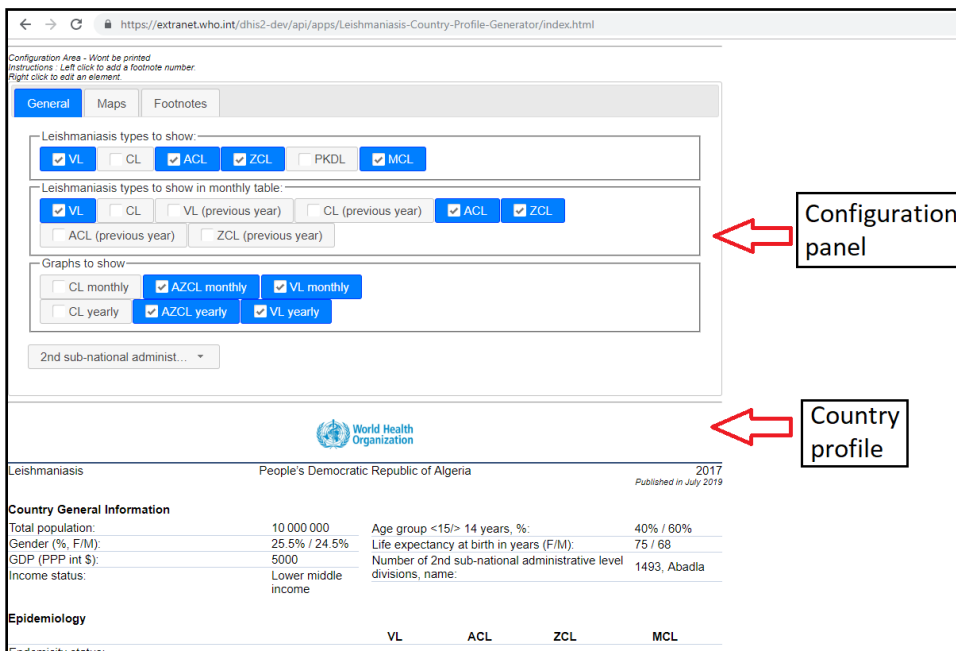

A form box like the following will appear

Two side-by-side screenshots of the 'Generate Country Profile' form. The left screenshot shows the input fields for 'Year' and 'Country' with placeholder text 'Enter and select country name'. The right screenshot shows the form with '2017' entered for 'Year' and 'al' entered for 'Country', with a dropdown list showing 'People's Democratic Republic of Algeria' and 'Republic of Albania'.

Start typing a year and a country. Once it starts appearing in the list, select it. This selection is needed, otherwise, the system won't take in account the text you typed.

The LCPG has two main sections: The configuration panel and the country profile itself.

A screenshot of the Leishmaniasis Country Profile Generator (LCPG) interface. The top section is the 'Configuration panel' with tabs for 'General', 'Maps', and 'Footnotes'. The 'General' tab is active, showing checkboxes for 'Leishmaniasis types to show' (VL, CL, AZCL, ZCL, PKDL, MCL) and 'Leishmaniasis types to show in monthly table' (VL, CL, VL (previous year), CL (previous year), AZCL, ZCL). The bottom section is the 'Country profile' for 'People's Democratic Republic of Algeria' in 2017, published in July 2019. It includes 'Country General Information' (Total population: 10 000 000, Age group <15/> 14 years, %: 40% / 60%, etc.) and 'Epidemiology' (VL, ACL, ZCL, MCL).

2.1 Configuration panel

In this panel you can configure which elements are showing in the CP and how. It has three tabs: General, to manage which types of the disease will appear in the tables, the graphs and the subnational level taken in account; maps to configure maps, legends and “notas bene”; and Footnotes, to manage which footnotes will appear in the CP.

2.1.1 General

The screenshot shows the 'General' tab of a configuration panel. At the top are three tabs: 'General' (active), 'Maps', and 'Footnotes'. Below the tabs are three main sections, each with a title and a set of checkboxes:

- Leishmaniasis types to show:** Includes checkboxes for VL (checked), CL, ACL, ZCL, PKDL, and MCL.
- Leishmaniasis types to show in monthly table:** Includes checkboxes for VL (checked), VL (previous year), CL, CL (previous year), ACL, ACL (previous year), ZCL, and ZCL (previous year).
- Graphs to show:** Includes checkboxes for CL monthly, AZCL monthly, VL monthly (checked), CL yearly, AZCL yearly, and VL yearly (checked).

At the bottom, there is a dropdown menu labeled '1st sub-national administr...' and a checked checkbox labeled 'recalculate maps to this level'.

Leishmaniasis types to show are checked if, at least, one leishmaniasis dataset of this type (VL, CL or ACL/ZCL) is assigned to the country. PKDL and MCL are unchecked by default.

The behavior is the same in the monthly table checkboxes except for previous years, whose checkboxes are by default unchecked.

The graphs checkboxes follow also the same logic.

The subnational level dropdown menu is set, by default, to the first subnational level. Changing it to 2nd or 3rd subnational level will update:

- The “Number of endemic X sub-national...” row text-and-value in the Country General Information section.
- The “Number of endemic X sub-national...” row text-and-value in the Epidemiology section.
- All the maps if the “recalculate maps to this level” checkbox is checked.

2.2.2 Maps

As in the previous tab, the maps checkboxes follow the same logic of the previous other checkboxes.

The screenshot shows a configuration window with three tabs: 'General', 'Maps' (selected), and 'Footnotes'. The 'Maps' tab contains two main sections: 'Maps to show' and 'Configure map'.

Maps to show: This section has four checkboxes: 'VL incidence' (checked), 'CL incidence', 'ACL incidence', and 'ZCL incidence'.

Configure map: This section is divided into two columns.

- Left Column:**
 - 'Select a Map' dropdown menu.
 - 'OrgUnit levels: WHO Member States - Level 1' with a slider below it.
 - 'OSM Light' dropdown menu.
 - 'Opacity:' slider set to 80.
 - 'Height:' slider set to 315.
 - 'Width:' slider set to 420.
 - 'Update Map' button at the bottom.
- Right Column:**
 - 'Select a Legend' dropdown menu.
 - 'Font size:' label.
 - 'Update Legend' button.
 - 'Resize Nota Bene for Maps:' section with 'Disabled' (selected) and 'Enabled' radio buttons.
 - 'Resize Nota Bene:' section with 'Disabled' (selected) and 'Enabled' radio buttons.

To update a map, select a map name on the dropdown. Select the deepest subnational level you want to see drawn in the map. You can select also the background layout, the opacity, the height and the width. Click “Update Map” once you finished the configuration.

You can relocate and resize the legend within the map. To do that, select a legend on the right dropdown menu. You will see appear the legend at right. You can resize it, edit the text or select the corner where it will be shown. Click “Update Legend” to apply changes.

Size of the two “Nota Bene” in the CP are locked by default. You may enable this feature to adapt the size of the box to the content or the location. Remember putting them back to “disabled” once you have finished.

2.2.3 Footnotes

General

Maps

Footnotes

Stored footnotes

Defined as "In this reporting period, an area at the 3rd sub-national administrative level reporting cases for the first time ever"

Defined as "Number of people living in 3rd sub-national administrative level endemic areas"

Defined as "In this reporting period, an area at the 2nd sub-national administrative level reporting cases for the first time ever"

Defined as "Number of people living in 2nd sub-national administrative level endemic areas"

Defined as "In this reporting period,

Footnotes page 1

1

Defined as "In this reporting period, an area at the 3rd sub-national administrative level reporting cases for the first time ever"

2

Defined as "Number of people living in 3rd sub-national administrative level endemic areas"

3

Relapse in this country is defined as: "a patient who experiences recurrence of VL symptoms with parasitological confirmation at any time point after initial cure"

Footnotes page 2

4

Failure in this country is defined as: "signs and symptoms persist or recur during treatment or up to initial treatment outcome assessment"

In this section you organize the footnotes stored in and got from the footnote program.

To move one footnote from one page to another or to remove from the CP, just drag and drop it in the correct box. You can reorder them within the box. The footnote index will be accordingly updated. However, the index you put in the CP text are not "linked" to these footnotes: It's up to you to make sure the reference and the index match.

2.2 Country profile

2.2.1 Texts to update before printing

Two texts in CP are generated but must be verified before printing. Those text are highlighted in red and, as described in 2.2.2 section, can be modified and its color changed to black. The texts are:

Name of the division levels: The system, takes, as example, the first subdivision level found, but this text should be updated to its specific category name (region, district, department, upazilla... etc).

Age group <15/> 14 years, %:	- / -
Life expectancy at birth in years (F/M):	N/A / N/A
Number of 1st sub-national administrative level divisions, name:	6, Central

Title on maps: The text in red is automatically changed when you check or uncheck the maps, checkboxes. Just, verify the title is correct and change the color to blue.

Distribution of VL and CL cases per 10 000 population

2.2.2 Edit elements in the CP

You can edit almost any text in the CP. To do that, just right click on the element and an edit field box will pop up. You can change the text, color, size, text style, add hyperlinks, etc.

2.2.3 Footnote elements in the CP

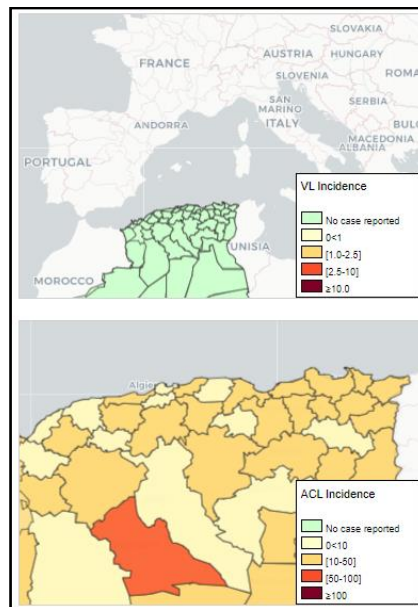

You can footnote almost any element of the CP by left clicking on the element. A footnote index (1 for first clicked element) will be added to the element. The next element will be footnoted with the number "2" and so on. If you want to remove a footnote index, just left click again on it. It's better to remove all higher footnote indexes first, to keep a logic sequence of indexes.

Was there any outbreak?¹
Number of new foci:²
N/A not applicable

2.2.4 Arrange maps and charts

Charts and maps can be moved by clicking on them and moving the mouse to the desired location.

In addition, maps can be zoomed in and its content moved up, down, left or right. However, they cannot be zoomed out for the instance. If you need to reset a map, just go to the maps section in the configuration zone, select the map and click on “Update map”.

2.2.5 Printing the CP or saving it as PDF

In order to generate the PDF version of the CP, click ctrl+P. You can adjust the final with the parameters: paper size (A4) scale (normally 100%), margins (minimum or custom). Select your printer or the option “Save as PDF”.

The screenshot shows the CP interface for the Federal Democratic Republic of Nepal. The top section displays "COUNTRY GENERAL INFORMATION" with fields for Total population, Gender (% F/M), GDP (PPP int \$), Income status, and Age group <15> 14 years, %. The middle section displays "EPIDEMIOLOGY" with fields for Endemic status, Number of new cases (incidence), Number of relapse cases, Total number of cases, Imported cases (%), Gender distribution (% F/M), Age group distribution (% <5-14> 14), Incidence rate (cases/10 000 population in endemic areas), Number of endemic 1st sub-national administrative level divisions (n), Population at risk (%), and Has there any outbreak?. The bottom section displays "Division of new cases January December" with a line graph showing the number of new (primary) VL cases reported by month in 2016 and 2017. The right side of the interface shows the printing settings, including "Print", "2 sheets of paper", "Color", "More settings", "Paper size" (A4), "Pages per sheet" (1), "Margins" (Custom), "Quality" (120 dpi), "Scale" (Custom), and "Options" (Headers and footers, Background graphics). The "Print" button is highlighted.

3. Source of information in country profile sections

3.1 Country general information section
